Electrostatic Sensor

EF-S1 SERIES

Continuously check invisible static electricity in lines

**Constantly check static in lines!**
With this inline-capable surface potential sensor, you can constantly monitor static that will be generated in various places in a process while running a line and, if there is any abnormality, you can respond to it immediately. It will clarify damage or failure caused by static which has been hard to find out before, allowing the maintenance of stable quality.

**Reduce the inspection man-hours for the ionizer**
You can see the neutralizing effect of the ionizer in real time, so it is possible to objectively verify damage on the ionizer or time to replace expendable parts. By quickly finding decrease in the effect of the ionizer, it will relieve concerns like "Is it really neutralizing?", and reduce the man-hours required for inspection and verification.

**New proposal for electrostatic measurement**
Unlike the off-line measurement with a handheld instrument, it can be installed in a line in the same way as photoelectric sensors, thus reduces variation in measurements caused by differences in workers, measurement sites and distance to help improve reliability. In addition, with its variety of features such as the window comparator output that outputs a signal when the measured value exceeds the measurement range, and analog output essential for data collection and analysis, it enables line control for anti-static measures similar to the beam sensor (photoelectric sensor).

---

Electrostatic Sensor

EF-S1 SERIES

panasonic.net/id/pidsx/global
**APPLICATIONS**

- Surface potential measurement when releasing BG sheets
- Surface potential measurement during chip release electrification
- Surface potential measurement during loading and unloading
- Measurement of lead frame charge removal
- Measurement of frictional electrification of printed circuit boards
- Measurement of frictional electrification of LCD modules

**BASIC PERFORMANCE**

**Suitable for measuring under severe conditions**

High-precision design with a repeatability precision of ±0.3 % F.S. Even very slight differences in potential will not be skipped over.

**MOUNTING / SIZE**

**Lightweight and compact for easy setup in any location**

The sensor head only weighs 90 g approx. Installation can be carried out easily using just a bracket so that it is suitable for use in a wide variety of applications. In addition, power consumption is low so the devices can be utilized without concerns of high running costs.

**FUNCTIONS**

**Easy-to-read 2-color dual display**

The controller is equipped with a red and a green display. Current values and threshold values can be viewed at a glance.
### ORDER GUIDE

**Sensor head**

<table>

Notes:
1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20 °C +68 °F.
2) The display range (measurement range) is switched automatically when the measurement distance setting is changed at the controller.
3) The measurement range mode is switched automatically when the measurement range setting is changed at the controller.
4) Measurement areas will vary depending on the measurement distances.
5) Measurement areas will vary depending on the measurement distances.
6) In order to satisfy the linearity specifications for the analog output, do not use the judgment output.
## I/O CIRCUIT AND WIRING DIAGRAMS

### EF-S1C

**I/O circuit diagram**

- **Color code**
  - Brown: +V
  - Black: OUT1
  - White: OUT2
  - Gray: Analog output voltage (Note 2)
  - Pink: Timing input/0-adjust input
  - Blue: 0 V

**Wiring diagram**

- **Color code**
  - Brown: OUT2
  - White: +V
  - Gray (Note 2): OUT1
  - Blue: 0 V

**Notes:**
1. If using together with an ionizer, the 0 V line of this product should be connected to the ionizer ground. In addition, the metal parts of the sensor head (EF-S1HS) are connected to the 0 V line, so it should be insulated during installation.
2. In case of using the analog voltage output, connect a device having a input impedance of 1MΩ or more. Further, the analog voltage output does not incorporate a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load.

### EF-S1HS

**Non-voltage contact or NPN open-collector transistor**

- *Timing input/0-adjust input*
  - High (+V or open): Ineffective
  - Low (0 to +2 V): Effective

**Symbols**
- D: Reverse supply polarity protection diode
- ZD1, ZD2: Surge absorption zener diode
- Tr1, Tr2: NPN output transistor

**Point to note when using analog output**

Because the 0 V lines for judgment output and analog voltage output are common, the analog voltage output may vary depending on the load current. In order to satisfy the linearity specifications for the analog voltage output, do not use the judgment output.

### Connector for controller (CN-EP1) pin position

- **Terminal No.**
  - +V: Brown
  - 0 V: Blue
  - Sensor output: Orange/Violet
  - Shield wire

## SENSING CHARACTERISTICS (TYPICAL)

### EF-S1HS

**Measurement range – field of measurement**

- Measurement range L (mm in)
  - L = 8 mm: 0.315 in
  - L = 20 mm: 0.787 in
  - L = 40 mm: 1.575 in

**Installation tolerance**

- Display value tolerance characteristics
- Angular deviation

**Note:**
- If the value is tilting toward the positive side, the enclosure is causing interference, so if L ≥ 8 mm, there will be no graph display at 5 degrees or higher.

**Field of measurement (mm in)**

- Field of measurement ø (mm in)
  - ø0 ø1.181
  - ø3 ø80
  - ø6 ø120
  - ø10 ø160
  - ø15 ø200

**Display value tolerance (%)**

- ±2%
  - ±4%
  - ±6%
  - ±10%
  - ±20%

**Angular deviation (°)**

- ±0.2°
  - ±0.4°
  - ±0.6°

**Installation angular B (°)**

- ±0.2°
  - ±0.4°
  - ±0.6°

**Load**

- ±100 mA
  - ±200 mA
  - ±500 mA
  - ±1 A

**Color code**

- Blue (Note 2)
- White
- Gray (Note 2)
- Pink
- Black

**Selection Guide**

- Plastic Air-gun
- Cleaning Box
- Machine Vision Systems
- UV Curing Systems

**Notes:**
- If the installation tolerance is greater than 0.5 mm 0.020 in, change the measurement range setting at the controller.
PRECAUTIONS FOR PROPER USE

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

- The sensor head is manufactured according to specifications that are complete for use in combination with the optional exclusive controller. Be sure to use it together with the exclusive controller.
- Do not touch the sensor head and surrounding parts. If this is not observed, it may cause measurement accuracy to drop.
- The metal parts of the sensor head are connected to the 0V line of the exclusive controller power supply, so it should be insulated during use.
- Do not use with a plus ground.

Mounting

Sensor head

- Do not let dust stick to the measurement unit. When dust has adhered to the measurement unit and its surroundings, it may interfere with proper measurement. If dust has adhered to the measuring unit, blow it off using an air blower, etc.
- When fittings are charged, it affects the measurement accuracy, so use after grounding the fittings. However, the metal part of the case must be insulated.
- This product has higher sensitivity when used in the measurement distance of 21 to 100 mm 0.827 to 3.937 in compared to when used in the measurement distance of 8 to 20.5 mm 0.315 to 0.807 in, thus it becomes more susceptible to disturbance noise. Check the usage environment before using this product.

Wiring

- Make sure that the power supply is off while wiring.
- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- In case noise generating equipment (switching regulator, inverter motor, etc.) is used in the vicinity of this product, connect the frame ground (F.G.) terminal of the equipment to an actual ground.
- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.
- A thin cable of 0.09 mm² is employed for the sensor head. Note that pulling the cable with force may break the cable.
- Cannot extend the cable of the sensor head.
- Make sure that stress is not applied directly to the sensor head cable joint.
- Extension up to total 10m 32.81 ft is possible with 0.3mm², or more, cable. However, in order to reduce noise, make the wiring as short as possible.

Others

- Do not use during the initial transient time (3 sec.) after the power supply is switched on.
- In order for stable sensing to be carried out, wait for 10 min. after turning on the power before use.
- Do not use in places where there are strong electric fields apart from those for the object being measured.
- Do not use in strong magnetic fields.

DIMENSIONS (Unit: mm in)

The CAD data can be downloaded from our website.
