High-speed detection even a little liquid leak

**EX-F70 SERIES**

**Reliable detection**

The unique effect of capillarity enables reliable detection of small leaks and viscous liquids.

**New type of detection method**

When a leak occurs, the beam from the beam-emitting part scatters through the leaked liquid and is not transmitted to the beam-receiving part.

**Compact, space-saving**

This slim (10 mm 0.394 in) side-mounting sensor is especially good for use in confined spaces.

**No need for sensitivity adjustment**

No need for sensitivity adjustment with adjuster, so initial mounting is easy.

**Easy operation check**

This sensor is equipped with a NORMAL indicator (green) which lights up when mounting correctly, and a FAULT indicator (red) which lights up when sensing the leaked liquid or when mounted incorrectly (forgetting to mount exclusive mounting bracket). So, the operation can be checked easily.

**Safe design**

If the sensor is not mounted correctly, if the cable is broken or disconnected, or if the sensor is not operating correctly, the output is the same as when the beam is not received (LEAK). Design deals with human errors such as, forgetting to mount, etc.

**Easy installation & reset**

Facilitates easy installation: the SUS mounting bracket type can be installed using only a single screw and the PVC mounting bracket type can be installed using only two screws or an adhesive. No component replacement required for resetting after leak detection. The simple shape makes it easy to wipe off the leaked liquid.

**PVC mounting bracket available**

A mounting bracket made of PVC (polyvinyl chloride) is available. This mounting bracket can be used normally in environments that would corrode normal metal brackets.
**EX-F60 SERIES**

**PFA enclosure gives excellent chemical resistance**

The sensor enclosure and the cable sheath are made from PFA which is highly resistant to chemicals. Accurate sensing is achieved even if there are leaks of chemicals such as sulfuric acid, hydrochloric acid or ammonia.

**Easy installation & reset**

The simplified shape makes it easy to clean up after liquid leaks, simply by wiping off the liquid, and no parts need to be replaced.

---

**EX-FC1**

**Wire-saving unit made especially for connecting leak detection sensors!**

**Saves wiring! Now connects up to 8 leak detection sensors**

EX-FC1 is a simple wire-saving unit for exclusive use with EX-F71/F72, EX-F61/F62 leak detection sensors. (It can be used with general sensors as well.)

EX-FC1 integrates the outputs from up to 8 leak detection sensors into a single OR output, so significant wiring and space savings are achieved.

* Even with only one leak detection sensor connected, an OFF signal is output if the sensor detects liquid leakage, or if the unit has been installed incorrectly.

**Compact, space-saving**

Even with its built-in amplifier, the size is compact at W26 × H19 × D9 mm W1.024 × H0.748 × D0.354 in, so that it can be used even in narrow spaces.

**Slim & compact**

Space savings are significant, as the ultra-thin & compact EX-FC1 has main unit body dimensions of only W20 × H80 × D52 mm W0.787 × H3.150 × D2.047 in.

**Connects easily with one-touch connector**

Connections are made by simply inserting the leak detection sensor cable leads into the snap male connector SL-CP1, then push until the connector snap-locks! This saves the time and the trouble of stripping the insulation from each lead before attaching to terminals.

### SPECIFICATIONS

#### Sensors
- **Type**
  - SUS mounting bracket type: EX-F71
  - PVC mounting bracket type: EX-F72
  - PFA mounting bracket type: EX-F61
  - PVC mounting bracket type: EX-F62

- **Chemical-resistant**
  - Agent, such as Sulfuric acid, Hydrochloric acid, Phosphoric acid or Ammonia etc. (Note 2, 4, 6)

- **Sensing object**
  - Water, Fluorinert™ (Note 2, 3)

- **Supply voltage**
  - DC-12 or DC-13

- **Current consumption**
  - 10 mA or less (PNP output type: 15 mA or less)
  - 15 mA or less

- **Output**
  - <PNP output type>
    - NPN open-collector transistor
      - Maximum sink current: 50 mA
      - Applied voltage: 30 V DC or less (between output and 0 V)
      - Residual voltage: 0.4 V or less (at 6 mA sink current)
  - <PNP output type>
    - NPN open-collector transistor
      - Maximum source current: 50 mA
      - Applied voltage: 30 V DC or less (between output and +V)
      - Residual voltage: 1.0 V or less (at 50 mA source current)

- **Utilization category**
  - DC-12 or DC-13

- **Output operation**
  - In normal state: ON, When leak detected or the sensor is mounted improperly: OFF

- **Response time**
  - 50 ms or less

- **FAULT indicator**
  - Red LED (lights up when the leak liquid is detected, or the sensor is mounted improperly)

- **NORMAL indicator**
  - Green LED (lights up when the sensor is mounted properly)

- **Pollution degree**
  - 3 (Industrial environment)

- **Protection**
  - IP67 (IEC)

- **Ambient temperature**
  - –10 to +60 °C +14 to +140 °F (No dew condensation or icing allowed), Storage: –20 to +70 °C –4 to +158 °F (Note 5)

- **Ambient humidity**
  - 35 to 85 % RH, Storage: 35 to 85 % RH

- **Ambient illumination**
  - Incandescent light: 1,000 lux at the light-receiving face

- **Emitting element**
  - Infrared LED (non-modulated)

- **Material**
  - Enclosure: Polypropylene
  - Cable: 0.1 mm² 3-core PVC cable, 2 m 6.562 ft long
  - Connector: 0.1 mm² 3-core PFA cable, 3 m 9.843 ft long

- **Cable extension**
  - Extension up to total 50 m 164.042 ft is possible with 0.3 mm², or more, cable.

- **Weight**
  - Net weight: 25 g approx.
  - Net weight: 60 g approx.

#### Notes
1. Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20 °C +68 °F.
2. Highly viscous liquid may not be detected stably.
3. Fluorinert™ is the world wide trademark of 3M.
4. The agents mentioned above are examples. For details, please contact our office.
5. Liquid being detected should also be kept within the rated ambient temperature range.
6. PVC mounting bracket may not be used depending on type or viscosity etc. of the agent. For details, please contact our office.
7. The mounting bracket for EX-F71(PN) is not interchangeable with that of EX-F72(PN) due to the different sensitivity settings of each sensor.

(Amplifier built-in leak detection sensor)

Note: The output does not incorporate a short-circuit protection circuit.
Do not connect it directly to a power supply or a capacitive load.
Leak Detection Sensor EX-F70 SERIES EX-F60 SERIES

PRECAUTIONS FOR PROPER USE

Never use this product as a sensing device for personnel protection.
In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

EX-F71(-PN) EX-F72(-PN)

Mounting

EX-F71(-PN)
Insert the M4 stud-bolt (length 10 mm 0.394 in or more) welded on the user’s facilities into the mounting hole of the SUS mounting bracket and screw with an M4 nut (please arrange separately). The tightening torque should be 0.98 N·m or less.

EX-F72(-PN)
In case of using the two-point-fixing PVC mounting bracket
Insert M4 stud-bolts (length 10 mm 0.394 in or more) welded on the user’s facilities into the mounting holes of the two-point-fixing mounting bracket and screw with M4 nuts (please arrange separately). The tightening torque should be 0.49 N·m or less.

In case of using the PVC mounting bracket for adhesive fixing
Use adhesive to stick fast the mounting bracket on the mounting surface. Please note that if the adhesive sticks out from the bottom surface of the mounting bracket or is 0.5 mm 0.020 in, or more thick, the sensor body cannot be fitted to the mounting bracket.

How to fit the sensor body to the exclusive mounting bracket
Match the notch in the sensor body with the projection of the exclusive mounting bracket and slide till a click is felt.
When mounting, make sure to use the brackets included with the unit in order to eliminate human error (such as forgetting to install). If the included brackets are not used, stable sensing is rendered impossible.
Also, because sensitivity settings differ between the EX-F71(-PN) and the EX-F72(-PN), their brackets cannot be interchanged.

EX-F61(-PN) EX-F62(-PN)

Mounting

EX-F61(-PN)
Insert the M4 stud-bolt (length 10 mm 0.394 in or more) welded on the user’s facilities into the mounting hole of the PFA mounting bracket and screw with an M4 nut (please arrange separately). The tightening torque should be 0.98 N·m or less.

EX-F62(-PN)
Please note that if the excess adhesive from the bottom surface of the exclusive mounting bracket is remained, the sensing capability may be affected. Use adhesive for vinyl chloride (PVC).

How to fit the sensor body to the exclusive mounting bracket
Align the projections in the sensor body with the notches of the exclusive mounting bracket and slide till a click is felt.

How to remove the sensor body from the exclusive mounting bracket
Pinch the projections of the sensor body and pull the body upwards. Never pull the cable, since it may cause a cable break.
### PRECAUTIONS FOR PROPER USE

#### EX-FC1

**Mounting**
- When mounting the unit, be sure to use the unit mounting base (MS-SL-2) (accessory).
- When installing the unit mounting base to the unit, insert the base aligned with the grooves of the unit and move until the unit stopper is locked.

- Two installation positions are available for the unit mounting base so that the unit direction can be changed. Install the base at one of them.

**Part description**

</table>

**Connection**

- Make sure to connect or disconnect the snap male connector (SL-CP1) in the power supply off condition.
- Take care that wrong wiring will damage the product.
- The terminal No. 4 of the snap male connector (SL-CP1) is not used.

**Connection method**
- By holding the SL-CP1 with the cable connected, insert it into the connector of the EX-FC1 reliably till it stops.

**Disconnection method**
- By holding SL-CP1, pull it from the EX-FC1 horizontally.

**Note:** Do not pull out by holding the cable, as this can result in cable disconnection.

---

**Mounting position 1**

**Mounting position 2**

**In case of using a DIN rail or the mounting bracket (MS-DIN-3) (optional)**

1. Fit the rear part of the unit mounting base on a 35 mm 1.378 in width DIN rail or the mounting bracket (MS-DIN-3) (optional).
2. Press down the front part of the unit mounting base on the 35 mm 1.378 in width DIN rail and fit the front part of the base on the DIN rail.

* For removal, insert a flathead screwdriver into the DIN rail stopper and pull towards yourself.

**In case of using screws**

- Mount using M4 pan head screws with a tightening torque of 0.8 N·m or less. However, in case of side mounting, make sure to mount the unit such that the unit stopper faces front.

---

</tr>
</tbody>
</table>

- For the channel that the unit sensor is connected to and the connection setting switch is set to “ON” side, the error indicator (red) lights up for a moment when the power is turned on. This is not a malfunction for the unit because it is caused by characteristic of the sensor.

- Make sure to set the connection setting switch with the connector No. to which the leak detection sensor is connected, to “ON” side.

- In case both the normal indicator (green) and the error indicator (red) light up, the connection setting switch with the connector No. to which the leak detection sensor is connected, is not set to “ON” side. Set the connection setting switch with the connector No. to which the leak detection sensor is connected, to “ON” side.

- In case the error indicator (red) lights up, the leak detection sensor detects leak or the connection setting switch is set to “ON” side without connecting the leak detection sensor. If the connection setting switch is set to “ON” side without connecting the leak detection sensor, set the connection setting switch to “OFF” side.

- If the leak detection sensor detects leak or the connection setting switch is set to “OFF” side in the state that the leak detection sensor is improperly mounted to the mounting bracket, the sensor judges as the output is ON. Be careful when setting.

- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.

- Make sure to use an isolation transformer for the DC power supply. If an auto-transformer (single winding transformer) is used, this product or the power supply may get damaged.

- In case noise generating equipment (switching regulator, inverter motor, etc.) is used in the vicinity of this product, connect the frame ground (F.G.) terminal of the equipment to an actual ground.

- Do not use during the initial transient time (leak detection sensor: 50 ms approx., EX-FC1: 0.5 sec. approx.) after the power supply is switched on.

- Since this sensor employs non-modulated infrared LED, take sufficient care against extraneous light. Do not expose the sensing part directly to the extraneous light.

- Avoid dust, dirt, and steam. Further, do not use this product in an environment containing organic solvents.

- Take care that EX-7T(-PN) and EX-FC1 does not come in contact with oil, grease or organic solvents, such as thinner, etc.

- In case this sensor is used where electrostatic charge is present, use a metal leak pan, which should be connected to an actual ground.

- These sensors are only for indoor use.

## All models

### Wiring

- Make sure that the power supply is off while wiring.

- Verify that the supply voltage variation is within the rating. Take care that if a voltage exceeding the rated range or an AC power supply is directly applied, the sensor may get damaged or burnt.

- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.

- In case noise generating equipment (switching regulator, inverter motor, etc.) is used in the vicinity of this product, connect the frame ground (F.G.) terminal of the equipment to an actual ground.

- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.

- Make sure to use an isolation transformer for the DC power supply. If an auto-transformer (single winding transformer) is used, this product or the power supply may get damaged.

- In case a surge is generated in the used power supply, connect a surge absorber to the supply and absorb the surge.

- Cable extension is possible up to total 50 m 164.05 ft with 0.3 mm², or more, cable (less than 10 m 32.81 ft for EX-FC1). However, in order to reduce noise, make the wiring as short as possible.

- Make sure that stress by forcible bend or pulling is not applied directly to the sensor cable joint.

- EX-FC1 output does not incorporate a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load.

## Others

- Avoid using the product in an explosive atmosphere because this product does not have an explosive-proof protective construction.

- When liquid remains on the sensing surface after leak detection, wipe all liquid from the sensing surface. To avoid scratching the sensing surface and the enclosed mounting bracket, use a soft cloth.

- In case air bubbles are drawn into the sensing part, take care that it may take some time for sensing to stabilize, or sensing may even become unstable. Check the usage conditions thoroughly before use.

- Do not use during the initial transient time (leak detection sensor: 50 ms approx., EX-FC1: 0.5 sec. approx.) after the power supply is switched on.

- Since this sensor employs non-modulated infrared LED, take sufficient care against extraneous light. Do not expose the sensing part directly to the extraneous light.

- Avoid dust, dirt, and steam. Further, do not use this product in an environment containing organic solvents.

- Take care that EX-7T(-PN) and EX-FC1 does not come in contact with oil, grease or organic solvents, such as, thinner, etc.

- In case this sensor is used where electrostatic charge is present, use a metal leak pan, which should be connected to an actual ground.

- These sensors are only for indoor use.
## DIMENSIONS (Unit: mm in)

### EX-F71(-PN) EX-F72(-PN)
